

HB 1245 -- SCHOOL NURSES

This bill allows each school board to authorize a school nurse to keep on hand and administer prefilled syringes of epinephrine in two dosage strengths. The nurse may administer the medication when, based on training, he or she believes a student is having an acute anaphylactic episode. The prescription must be written by a licensed physician listing the school district as the patient, include the nurse's name, and be filled at a licensed pharmacy.
