

HB 1225 -- Informed Consent for Abortions

Sponsor: Cunningham (86)

This bill requires a physician who will be performing an abortion or a certified technician working with the physician to conduct an obstetric ultrasound on the pregnant woman to verify the gestational age of the fetus at the time the abortion is to be performed. The ultrasound images must be reproduced and given to the pregnant woman to review with the physician or allied health professional working with the physician before informed consent is obtained to perform the abortion.
