

HB 2322 -- Paternity Determinations

Sponsor: Hubbard

This bill allows a person against whom a judgment of paternity and support has been entered to petition the circuit court to set aside the judgment. The petition must include an allegation that genetic testing using DNA determined within 99% probability that the person is not the child's father or a request for a court order of genetic paternity testing to determine the person's status as father. A court determination of non-paternity requires the cancellation of the child support order and arrears and the modification of the child's birth certificate accordingly. An action for paternity determination may be brought at any time.
