

HB 2400 -- NET METERING

SPONSOR: Miller

This bill modifies the Net Metering and Easy Connection Act by exempting any municipal utility or rural electric cooperative that serves less than 10,000 connected meters from the provisions of the act. When approved by the PSC or the governing body of the retail electric supplier, the supplier may also charge a customer-generator any additional standby, capacity, interconnection or other fee or charge this is reasonably calculated to recover the portion of fixed costs for providing service to the customer-generator.

The bill also allows the estimated generating capacity of all net metering systems to count towards compliance with any applicable federal law.
