

HB 2028 -- UTILITY SERVICE

SPONSOR: Morse (151)

This bill specifies that any new structures on a tract of land may be served by the electrical supplier that serves the other structure on the tract and that, at the discretion of the property owner, a utility may continue to serve a structure even if the ownership of the property is transferred.

The bill also specifies that a property owner whose property is located on the boundary line of a territorial agreement between two utility providers may choose the electrical service that is most convenient and cost-effective without applying to the Public Service Commission for a change in the agreement.
