

HB 192 -- NET METERING

SPONSOR: Plank

Currently, if the electricity generated by a customer-generator exceeds the electricity supplied by the supplier during a billing period, a customer will be credited an amount at least equal to the avoided fuel cost of the excess kilowatt-hours generated. This bill requires that the customer be credited an amount at least equal to the billing rate of the excess kilowatt-hours generated. In addition, the bill requires any remaining credits granted to the customer-generator be refunded at the end of each calendar year as well as when the customer-generator disconnects service.

This bill is the same as HB 1864 (2024) and HB 1329 (2023).
