

HCS HBs 2656 & 2388 -- GEOENGINEERING AND WEATHER MODIFICATION

SPONSOR: Whaley

COMMITTEE ACTION: Voted "Do Pass with HCS" by the Special Committee on Intergovernmental Affairs by a vote of 7 to 3.

This bill creates the "Clean Skies Act", which prohibits any person from engaging in any form of geoengineering, weather modification, or cloud seeding in the State. The bill defines "cloud seeding", "geoengineering", and "weather modification" among other terms.

The Department of Natural Resources must create a publicly accessible online form for reporting suspected violations of the prohibition and establish procedures to investigate credible reports. The form must contain a warning that filing a false report with the department constitutes a class B misdemeanor.

The Department must investigate credible reports. The bill specifies criteria that make reports credible. Failure to report a violation or making a false report of a violation both constitute a class B misdemeanor.

If the Department finds a violation has occurred, it must forward such violation to the county prosecutor of the county in which such violation occurred or the Attorney General's office for potential prosecution.

The Department can enlist the assistance of local law enforcement, the Highway Patrol, or the National Guard to investigate and enforce the provisions.

Any person convicted of a violation of this bill will be guilty of a class A misdemeanor for a first offense and a class E felony for a second or subsequent offense, except that any offense which results in serious physical injury or death will constitute a class C felony.

The bill provides that any person harmed by a violation of the bill may commence a civil action in a court of competent jurisdiction, and such court may grant damages, including punitive damages, injunctive relief, attorney's fees, and other appropriate relief.

The bill excludes contrails and farming and ranching operations, as long as such farming and ranching operations do not constitute cloud seeding.

This bill is similar to HB 2388 (2026).

The following is a summary of the public testimony from the committee hearing. The testimony was based on the introduced version of the bill.

PROPOSERS: Supporters say that this is a real issue, recognized by the EPA. It isn't a conspiracy. They don't want toxic pollution sprayed into the air to modify our climate. The risks of doing nothing are expanding and pose risks to our land, environment, agriculture, and children. Three states have already passed similar legislation, and the majority of the remaining states are working on versions of their own. Particulate matter is being released into the air to cause increased formation of clouds, which pollutes our waterways. The government is funding some of this weather modification. People want something done about this issue. The people don't give consent to be the subjects of environmental experiments without their knowledge and that affect their wellbeing. There's been a historical lack of transparency on this issue. Geoengineering and weather modification are happening and will reach a point of no return. The head of the EPA says it's real. The goal is to dim the sun to mimic a volcanic eruption. Globalist leaders across the world know this is risky and could end up killing many tens of thousands of people a year as a result. Private companies are releasing balloons and spraying the stratosphere with chemicals. Reflecting the sun's rays would cause crops to fail and spread respiratory illnesses and death. The goal of those releasing these chemicals is to reduce the temperature of the earth by blocking out the sun. Alzheimer's wasn't around in decades past. Aluminum is the highest contributing factor to Alzheimer's, and our backyards have high levels of aluminum due to pollution of previously pure rainwater that happens as a result of air travel. Aluminum, barium, and strontium is in all of our soil. The government seeded the clouds in Vietnam, and there is video evidence of Lyndon Johnson saying that "he who controls the weather controls the world". There's a daily or weekly report in Florida requiring airports to share whether they've seen any planes coming in with spraying capabilities. This bill is a preventive measure to disincentivize entities engaged in these activities from coming to Missouri. Supporters state that when you spray chemicals on people without their knowledge, you're a terrorist. It causes eye

burning and doesn't improve weather. Weather modification is man's attempt to alter the environment to their own purpose. Cloud seeding is a version of this. Private companies use silver iodide injections to release chemicals to create clouds for profit. After 70 years of seeding, the Colorado River Basin is a major site of droughts. It isn't right for one person to cause the rain to fall on their property when it might have fallen on their neighbors property. God is the best weatherman. Supporters further state electromagnetic frequencies vibrate heavy metals in your body, causing damage to various organs. Electromagnetic radiation activates and causes damage though the radiation. Doppler radar towers are controlling the weather after heavy metals are shot into the sky for cloud seeding. These towers are 450 times as powerful as your microwave. Multiple proponents reported illness in the days following these weather modification activities. These substances should be subject to mandatory disclosure. Consent and free power of choice without deceit or constraint or coercion are required from any experimental subject. The nature, purpose, and duration of the experiment, the methods and means to be conducted, and the risks to his health or person must all be communicated. It is the duty and responsibility of anyone engaging in an experiment to ensure proper consent is sought and obtained from all subjects. Geoengineering and weather modification are argued as climate change measures, but 96% of NOAA weather stations were corrupted by the localized effects of urbanization. This distorted the facts and violated NOAA weather station collection standards. Without those stations, climate change and warming is not borne out in the data. The same kind of weather modification from operation Popeye in Viet Nam is happening here now. This is all to our detriment. There is no climate change. This is a realm of control for God and God alone.

Testifying in person for the bill were Representative Whaley; Kendra Heiss; Judith Moorefield; Kaley Head, Missouri Clean Skies; Mary Chapman; Michael Ray Hogan, Missouri Clean Skies; Robert Workman; Suzanne Renard Makarewicz; Armovine; John Burns; Pamela K. Grow M.D.; and Thomas Makarewicz.

OPPONENTS: There was no opposition voiced to the committee.

Written testimony has been submitted for this bill. The full written testimony and witnesses testifying online can be found under Testimony on the bill page on the House website.
