

HB 3211 -- ACCESSIBLE PRESCRIPTION LABELS

SPONSOR: Young

This bill establishes the "Accessible Prescription Labels Act".

Each person who receives a prescription drug will be notified by the pharmacy that an accessible prescription label is available to the person upon request at no additional cost. If a person informs a pharmacy that he or she is blind, visually impaired, or otherwise print-disabled, the pharmacy must provide to him or her an accessible prescription label.

A pharmacy providing a "prescription reader", defined as a device designed to audibly convey the information contained on the label of a prescription drug, will ensure that the prescription label is compatible with the prescription reader.

This bill is similar to HB 360 (2025).
